# Truelev

Fully levitating, bearing-less technology for critical, shear-sensitive mixing applications.

## The Ultimate low shear mixer

The fully levitating bearing-less Truelev Technology keeps the mix head floating free allowing outstanding low shear mixing.

## Maintenance free

Truelev has no wear parts and no moving parts in the motor for a truly maintenance free mixer.

## Superior mixing control

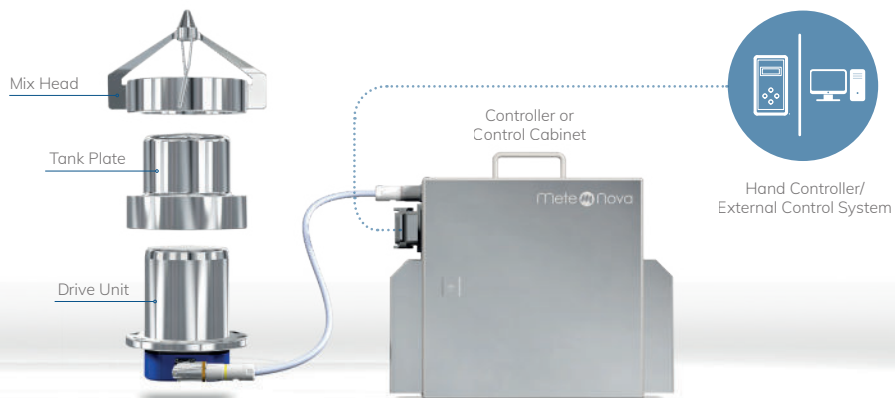

The mixer collects real time performance data, which is valuable for both process analytics and mixer control.

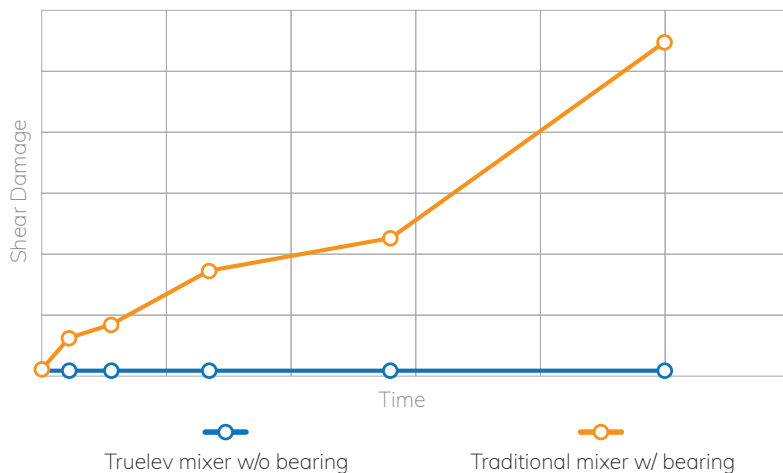

## Mobile version for transportation needs

The Truelev Mobile offers a feature that allows you to securely move the mobile vessel with the MixHead mounted, without a Drive Unit being attached.

An efficient Drive Unit with small footprint, no moving parts and no fan, makes the product specifically well suited for clean rooms.

Typical shear impact of proteine over time

The ultimate low shear mixing makes Truelev ideal for mixing large molecule products in the biopharma industry.
